

Report on the usage and benefits of the water purifier installed at Mama Jane Children Care Centre.

On behalf of the Community of Mama Jane Children Care Centre, allow me share a report on the usage and benefits of the water purifier that was installed to ease the access of safe drinking water to the children at Mama Jane Children Care Centre and also Mama Jane Early Childhood Centre. To date the Total Volume of water is 100 litres of water shared on a daily basis. Mama Jane currently has a total number of 35 children that utilize the purified water together with the 90 children in the Mama Jane Early Childhood Centre. All together 125 children on a daily basis have access to safe and clean drinking water. This facility has helped Mama Jane Children Care Centre reduce on the cost previously used to boil water and also the medical cost of treating water borne disease.

With saving and time, we have also reduced on the dependence on expensive alternatives especially when we had out door activities for the children, we just use of simplified water purifier and we have safe drinking water.

Lastly on behalf of the entire Mama Jane Community, allow me extend our sincere acknowledgement for the water purifier that is now serving over 125 children. May the almighty God bless you all for this generous gift that is safeguarding our health and safety.

Kaigwa seith.

Mama Jane Children Care Centre.
